Task 1: JSON API Route

1.Create a Flask application with an `/api` route. When this route is accessed, it should return a JSON list. The data should be stored in a backend file, read from it, and sent as a response.

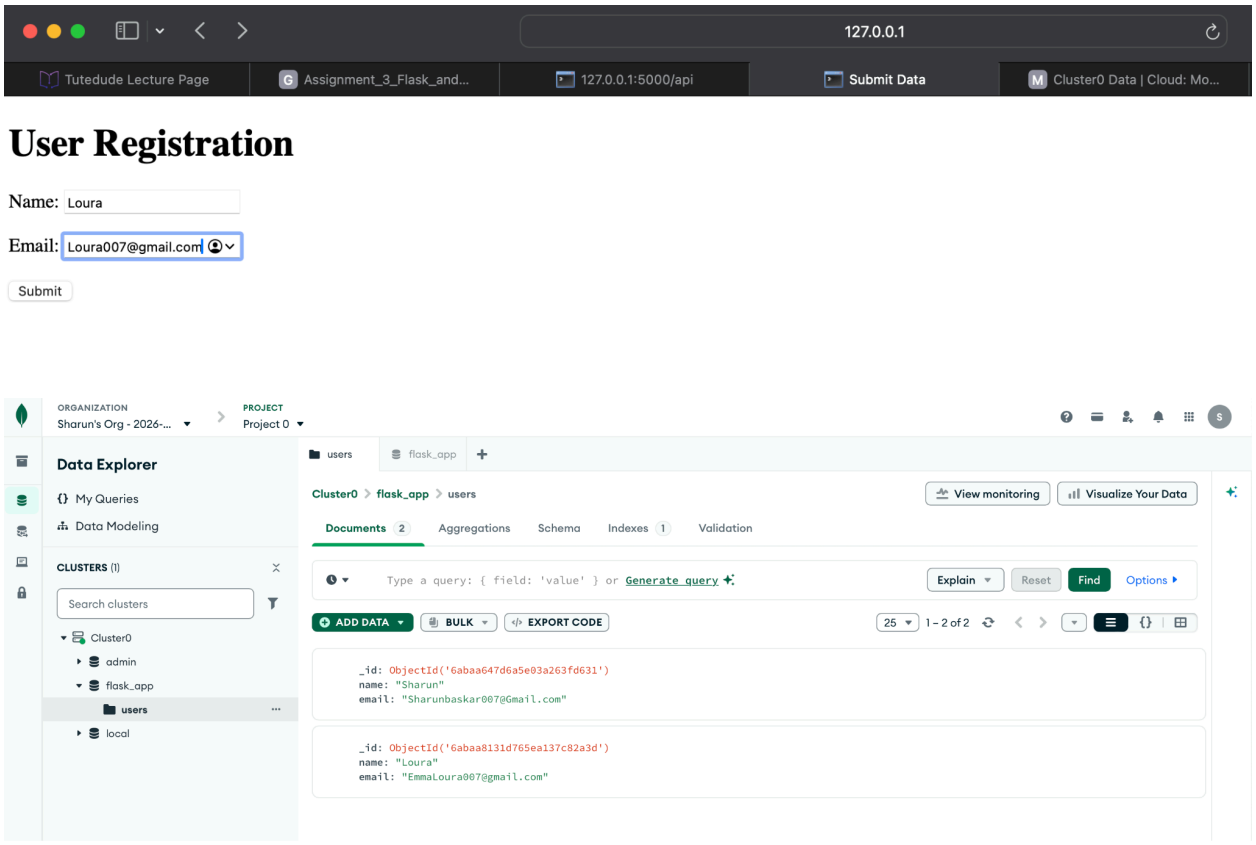

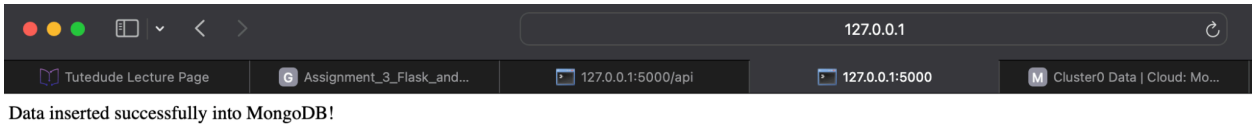

Task 2: Frontend Form with MongoDB Atlas

2. Create a form on the frontend that, when submitted, inserts data into MongoDB Atlas.

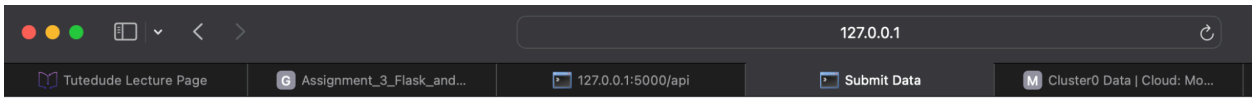

3. **On success:** the user should be redirected to another page displaying the message “Data submitted successfully”.

Data inserted successfully into MongoDB!

4. **On error:** display the error on the same page without redirection.
